SYNOPSIS

Not For Publication

Project Inner Space has reached its critical moment. Stephen Sorensen (DANA ANDREWS), the Nobel Prize winner who heads the scientific task force, rejects the advice of his second-in-command, Ted Rampion (KIERON MOORE), and orders the detonation of an A-Bomb miles below the earth's surface in order to break through to the valuable magma which makes up the earth's core. Immediately following the explosion, reports of earthquakes begin to come in from various areas of the world. Rampion quickly plots the disturbances as being on the volatile Macedo Fault. The tremors have caused a crack in the world, and unless it is halted, it will circle the globe and bring total destruction to life on the planet. The scientists decide the only way to stop the crack is to explode another nuclear device in its path. Rampion volunteers to lead the dangerous mission. Maggie (JANETTE SCOTT), Sorensen's wife and Rampion's former love, accompanies him. The bomb, placed inside an island volcano by Rampion, is successfully detonated. Celebration, however, is premature. The crack hasn't been stopped at all; it has changed course and is heading back to its starting point—Central Operations of Project Inner Space. In its path, millions are dying.

Central Operations is evacuated. Suddenly Rampion and Maggie notice that Sorensen has not come out. They descend to the innermost chamber of the disintegrating laboratory where Sorensen explains that he is dying of cancer. Realizing they cannot save him, Rampion and Maggie climb to the surface just as the crack converges with its point of origin. Amid a cataclysmic explosion, a large wedge of the earth lifts up and hurtles into space. A new moon is born—the crack has been stopped.

"Crack In The World" Could Happen Claims Its Star Dana Andrews

Many film goers appreciate science-fiction movies as a staple entertainment item, but very few are aware how many variations exist on this theme. According to Dana Andrews, there are more individual categories of science-fiction than recipes for soup. The handsome Hollywood screen star gave it a lot of thought during his assignment with co-stars Janette Scott, Kieron Moore and Alexander Knox in the Security Pictures production, "Crack In The World," for Paramount release, opening at the Theatre. In it, he plays the chief scientist heading a team of internationally dedicated probers seeking to unleash a new source of energy from the earth's core.

Candidly placing "Crack In The World" in the semi-science-fiction bracket, Dana Andrews explained why.

"High fission explosions under ground have become commonplace in recent years. Today, newspaper readers discuss the pros and cons even across the breakfast table. All we do in our film is to take a realistic fact that nuclear nations are experimenting with inner-earth nuclear blasts and project the consequences into the immediate future. There is no attempt at fantasy for fantasy's sake. I would rather call it a serious effort to help the common man come to grips with one phase of the amazing strides science has made in the last decade.

"In our look into the near future, fiction turns to drama when the fate of mankind suddenly comes to rest on the calculated risk of one scientist's decision. There are no monsters, no mad doctor devices, no creatures from outer worlds. Science itself contains all the ingredients creative film makers require to stage the greatest show on earth.

"But the fascinating thing for me is that 'Crack In The World' could really happen."

The "world" ended August 4th, not with a whimper but a bang. This reference is not, fortunately, to the world of reality, but that of science-fiction.

"Crack In The World," which opens at the Theatre, wound up production with a huge blast, staged by specialist Eugene Lourie, who had already simulated an H-Bomb explosion.

In the grand finale of the picture, special effects expert Lourie, with Director Andrew Marton supervising, blasted a huge chunk of earth into outer space.

Starring Dana Andrews, Janette Scott, Kieron Moore and Alexander Knox, the Paramount release deals with the disaster which results from an error made in attempting to seek the source of energy located at the center of the earth's core.

Still #47054/24 Mat 1B

A SCIENTIFIC EXPLANATION—Dana Andrews, as Dr. Stephen Sorensen, describes his Inner Space Project to a group of scientists and statesmen in this scene from Paramount's new semi-science fiction motion picture, "Crack In The World," which opens at the Theatre. Filmed in Technicolor, this exciting thriller also stars Kieron Moore, Janette Scott and Alexander Knox.

Still #47054/11

Mat 2A

TIME OUT . . . FOR LOVE! Scientist Stephen Sorensen, played by Dana Andrews, takes time out from his work to pay a little attention to his wife (Janette Scott) in this scene from Paramount's Technicolor semi-science fiction thriller, "Crack In The World," which opens at the Theatre. This Philip Yordan production is about an Inner Space Project which tries to release the unlimited energy beneath the Earth.

Exciting "Crack In The World" Is Semi-Science Fiction Thriller

"Science-fiction features will become the 'westerns' of the future," says Alexander Knox who co-stars with Dana Andrews and Janette Scott in Security Pictures' semi-science-fiction thriller, "Crack In The World," for Paramount release, opening at the Theatre.

Knox, an author in his own right, with four plays, several detective novels, and many years of journalism to his credit, feels that science-fiction films have not yet had the attention they deserve.

"I'm not talking about the monster, mad-scientist, or creature from outer space type," he said. "For some moviegoers these pictures fill a need, so they have their place in the entertainment world. I am referring to the films with some scientific validity—the semi-science-fiction stories that start with an accurate premise and carry through to an imaginary, but plausible conclusion. To me, these merit as much thought, work, and money as a 'Lawrence of Arabia,' a 'Ten Commandments,' or a 'Cleopatra.'"

Westerns have been with us since the dawn of the early flickers, he maintained. The steady growth of their popularity rating reached a new high with the advent of TV. Here was vigor, vitality, excitement, and adventure guaranteed to revive the sagging spirits of anyone bogged down in the daily grind. To the young, the cowboy was almost a national hero.

But the pace of this atomic age is so swift, he pointed out, that just in the last decade science has emerged from the cloistered sterility of the laboratory with an exciting new frontier—space—to capture the imagination of youth. "We are no longer entering the space age—we're in it!"

In his opinion, "Crack In The World" belongs in the semi-science-fiction category. "It's a timely theme, that of boring through the earth's crust to release the vast reservoir of energy that has so far defied every drill or conventional explosive. In the movie, a group of scientists use nuclear power to blast

their way through. They release the energy, but the poor old earth can't take it—it cracks! Their hair-raising efforts to stop the crack furnish some suspense-filled action scenes that are equal to any Western and positive proof that battling the earth's phenomena with scientific methods can be as exciting as guns, horses and villains."

Still #47054/9 Mat 1C

JANETTE SCOTT seems a bit startled as she watches an atomic bomb explode in this scene from "Crack In The World," Paramount's new semi-science fiction film which opens at the Theatre.

Realistic "Crack In The World" Is Thrilling Semi-Science Fiction Thriller

(Review)

"Crack In The World," a truly unusual and exciting motion picture opened last night at the Theatre. This semi-science fiction thriller, which stars talented Dana Andrews, English actress Janette Scott, Kieron Moore and Alexander Knox, tells of a scientific project to bring the magma, a power source located in the center of the earth, to the surface.

The story begins as Project Inner Space has reached its critical moment. Stephen Sorenson (Dana Andrews), the Nobel prize winner who heads the scientific task force, rejects the advise of his second in command, Ted Rampion (Kieron Moore), and orders the detonation of an A-Bomb miles below the earth's surface in order to break through to the valuable Magma which makes up the Earth's core. Immediately following the explosion, reports of earthquakes begin to come in from various parts of the world.

It seems that the tremors from the A-Bomb explosion have caused a "Crack In The World," and unless it is halted, it will circle the globe and bring total destruction to life on the planet. The result of this "Crack In The World" is one of the most exciting films ever put on the screen. Not for a moment does the viewer feel that this terrible catastrophe is beyond belief and not for a moment do your eyes leave the screen.

As professor Sorenson, Dana Andrews gives a splendid performance. He is the cause of the Earth's crack, and the weight of this dilemma is visibly brought out in his actions. Janette Scott, who plays Sorenson's wife, is an excitingly beautiful woman, and her performance indicates that she has learned a great deal about acting in the short 24 years of her lifetime.

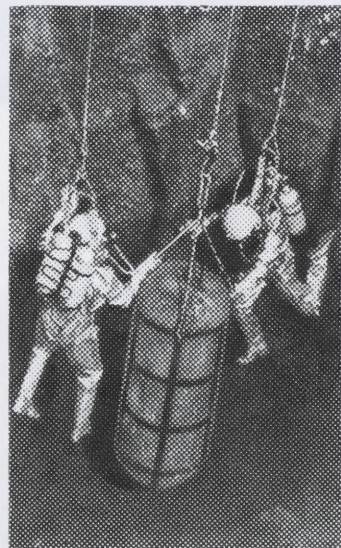

Handsome Kieron Moore, who has the role of scientist Ted Rampion, gives a powerful and believable performance. As Sir Charles Eggerston, distinguished actor Alexander Knox displays his varied talents to the utmost. The remainder of the cast, which includes a group of exciting newcomers, all come off admirably.

Directed by Andrew Marton and produced by Bernard Glasse and Lester A. Sanson, "Crack In The World" is one science-fiction (semi-science fiction) film that should not be missed. It has excitement, adventure plus a feeling of believability that will make you remember it for a long time to come.

Still #47054/5 Mat 1A

KIERON MOORE has one of the lead roles in Paramount's exciting new semi-science fiction thriller, "Crack In The World," which opens at the Theatre. Moore plays a geologist working on a highly important Inner Space Project. The cast of this Technicolor adventure also includes Dana Andrews, Janette Scott and Alexander Knox.

Still #47054/52 Mat 1E

DETONATING AN A-BOMB—In this scene from Paramount's semi-science fiction thriller, "Crack In The World," which opens at the Theatre, two scientists drop an A-Bomb into the mouth of a volcano in order to curtail a crack in the Earth's surface.

Kieron Moore Does Own Stunts For "Crack In The World"

Kieron Moore never dreamed of encountering physical danger, or flirting with serious injury when he became a member of the famous Irish Abbey Theatre at the outset of his career, but in the jump from stage to films he acquired a new viewpoint about the obligations of an actor to his profession.

"The screen actor today can no longer afford to appear before camera for comfortable close-ups only and relegate the spine-tingling action scenes to professional stunt men." In simple terms, Kieron believes that an actor must be mentally conditioned to face a variety of risks and danger.

No one role in his long film career, however, required him to risk his hide as often as he did in "Crack In The World," opening at the Theatre. In this exciting semi-science-fiction movie for Paramount release, Kieron stars with Dana Andrews, Janette Scott, and Alexander Knox as a top young scientist seeking unsuccessfully to prevent a nuclear blast to the earth's core.

Kieron's daredevil activity starts when the missile's burst creates world havoc and he is called on to check the ensuing Crack that is splitting the earth apart.

"When you are in a race to save the world, you can't be too finicky or cautious," he says. "To track the Crack, I had to race a tropical Land Rover over some of the roughest terrain any actor ever faced. This little sequence includes a drive to the top of a boulder with nothing but a sheer drop at the other side. It ends in a wild chase to head-off a doomed train, when I drive the high-g geared Land Rover with Janette Scott and two back-seat scientists clean smack into a swamp. At that point, a voice boomed over the loudspeaker: 'Bring them back alive.'"

Peril was plentiful right through shooting. It came to a climax as the Crack destroys the Inner-Space Operation Center two miles below the earth. Kieron and Janette Scott are trapped in the project's elevator after earth tremors demolish everything in the Crack's path. Director Marton had synchronized the scene to have a huge rock smash into the cabin on a given count.

"Crack In The World" Opens Here Soon

"Crack In The World," the new Paramount release, which opens at the Theatre, is a look into the future; the story of two scientists, who with an international staff, are involved in a project to tap the unlimited energy in the earth's core.

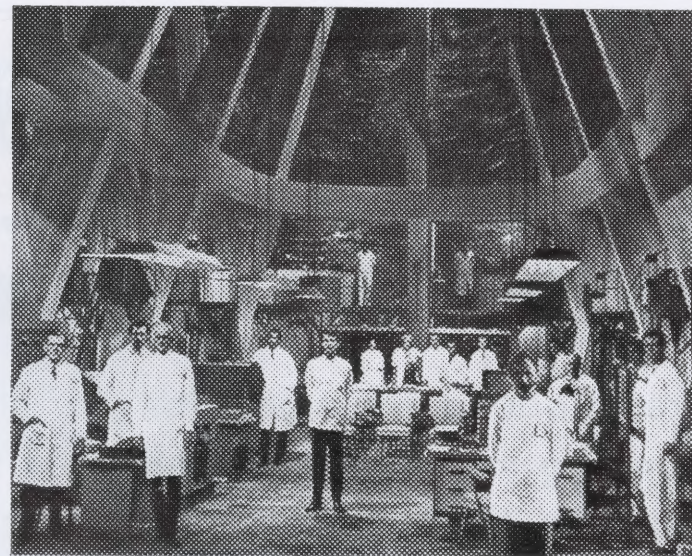

Boring the world's deepest shaft, the INNER SPACE PROJECT is the first attempt to utilize the molten mass at the earth's center to provide energy for all the world's industries.

The peril involved is a calculated risk; to break through the last barrier requires a missile capable of delivering a blast effect of ten megatons—enough of a danger to split open the "Macedo Fault," setting off a series of earthquakes, tidal waves and volcanic eruptions of such terrifying proportions that the planet is in danger of total destruction.

Starring in "Crack In the World," a Security Pictures Production, directed by Andrew Marton, are Dana Andrews, Janette Scott, Alexander Knox and Kieron Moore.

FILLER

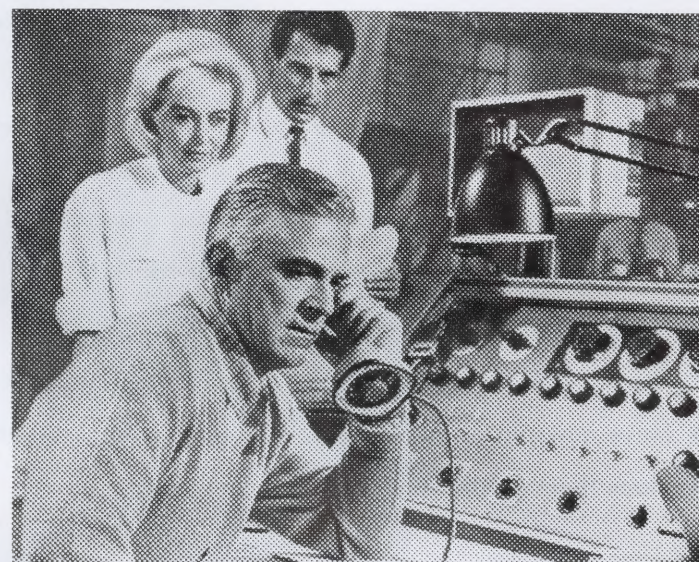

In "Crack In The World," a Paramount release which opens at the Theatre, Dana Andrews plays a chief scientist whose nuclear blast to the earth's core almost splits our civilized planet in two. When he reached Madrid, to report for the assignment, Dana warmed up by visiting the State Department's "Atoms at Work" exhibit touring the Continent.

Mat 2C

WAITING FOR A GOOD WORD—After detonating an A-Bomb in the center of the Earth, Professor Stephen Sorenson (Dana Andrews) awaits word on the result in this scene from Paramount's "Crack In The World," which opens at the Theatre. Filmed in Technicolor, "Crack In The World," stars Andrews, Janette Scott, Kieron Moore and Alexander Knox.

English Actress Janette Scott Speaks Her Mind On Tomorrow's Woman

The speed of change is often a disconcerting factor in modern life. It has become a perplexing one for many women taking the Twentieth Century in their stride with a career invasion of areas once solidly male. So says film star Janette Scott, who in less than a year, emerged from the crystallized cocoon of a wholesome movie sweetheart image, dyed her brown hair moonbeam blonde to become a full-blown glamor girl and then plunged into the role of Tomorrow's Woman.

Playing a young married scientist in "Crack In The World," opening at the Theatre, she has a much better understanding of the minor social crisis surging around the conflict of career integrity versus feminine instinct. "The woman of tomorrow," she says, "is the one who must eventually come to grips with the problem traps modern woman of today are just beginning to encounter."

In the science-fiction movie produced by Security Pictures for Paramount release, her husband (Dana Andrews) heads up Project Inner Space team of earth-probing scientists, seeking to release a new source of energy from the core of terra firma.

"My dilemma is one many women share once they subordinate kids and kitchen to professional prominence on an equal footing with the opposite sex," Janette earnestly believes.

"During the day, I am up to my hips in science ... my feminine self is neatly deposited in a test tube

and shelved until the day's work ends and I can remove a dull, stained lab coat."

On the other hand, Janette points out, women in careers today are discovering they cannot turn feminine charms off and on like a soda tap ... not when they have turned them on and left them on right through the ages.

"Maggie, the young married scientist, is a fine woman—attractive, intelligent, sensitive and gracious," Janette contends. "Yet the compatible marriage she tries so hard to hold together, goes out the window when her modern dilemma degenerates into personal conflict."

"A lot of tomorrow's women will readily identify with me when they see 'Crack In The World.' But if they are competent enough to help probe the earth's core, manage industries, run colleges, or hold seats in Congress, they should show equal competence in solving the potential maladjustments of marital relationships an increasing army of career women will face in the years ahead."

Still #47054/2/3 Mat 1D

A TENDER MOMENT—Janette Scott and Kieron Moore relax on the beach in this scene from Paramount's new science fiction thriller, "Crack In The World," which opens at the Theatre. Filmed in Technicolor, "Crack In The World" also stars, along with Miss Scott and Moore, Dana Andrews and Alexander Knox.

SENSATIONAL TWO-COLOR TABLOID HERALD BUILDS ADDED BOXOFFICE SPARK!

Create added excitement for your playdate with this outstanding four-page, two-color, 8½ x 11 Tabloid Herald loaded with boxoffice 'sell' for "Crack In The World."

This Herald has space to imprint your theatre name, playdate, name of your second feature or even an ad for a local merchant who agrees to distribute the Herald and share in the already low cost.

HOW TO EFFECTIVELY DISTRIBUTE THE HERALD

- Make an arrangement with the local milkman to deliver them with the milk.
- Place them on the counters of local shops.
- Arrange with a local restaurant for them to be inserted into coats and jackets while hanging in the checkroom.
- Give them to your patrons prior to your playdate.
- Have hotels place them in each of their rooms.
- Have merchants put them in bags and packages.
- Have a few youngsters deliver them door-to-door throughout your town.
- Have newspaper boys slip-sheet them into the local newspapers.
- Place them on the windshields of cars.

EXPLOITATION TIPS

- An ideal exploitation stunt would be to have pickets walk through the main streets of your town with provocative signs that say: BEWARE: "CRACK IN THE WORLD" IS COMING! or SCIENTISTS FEAR "CRACK IN THE WORLD"! Alert the newspapers in your area about this stunt—it might interest the editor in a feature story.
- A perfect spot for a screening would be in an underground cave or cavern. If in your area there is such a place, set up a screening for science editors and any other contacts who you feel may help publicize your playdate.
- Place a globe on a stand in your lobby. Draw a crack on the globe and have it pass through various countries. With this done, you can now run a "CRACK IN THE WORLD" CONTEST. Have your patrons try and guess the countries the crack passes through. The one with the most correct answers should be given a prize. Also, if there are prizes available, have a second and third place winner etc.

THE EARTH RIPS IN TWO ...AS PROJECT "INNER SPACE" BACKFIRES!!!

Science
miscalculates...
underground
atom bomb
explodes
earth's
core...
and the
world
totters
on the
brink of
destruction!

SEE...daring mag-
nauts descend into
boiling pits at center
of the earth!

SEE... underground
H-blast pulverizes
entire island...

SEE... 1000' flames
twist mountains into
molten lead...

SEE... the blonde
scientist... trapped
underground with her
lover and her husband.

SEE... crack after
thunderous crack as
the earth bursts open
...ripping asunder...

SEE... continents
wrenched off the earth
...streaking for outer
space to become a
fiery new moon!

TODAY'S TERRIFYING LOOK INTO WHAT MIGHT HAPPEN TOMORROW!
